## INTRODUCTION

PROFILE LP connects directly to your computer to turn your treasured vinyl recordings into digital music. We have included several software packages to aid you in converting your vinyl recordings. You should install one of the following applications to take advantage of computer recording:

- **EZ Vinyl/Tape Converter (PC only)** is the quickest and easiest way to turn your recordings into digital media. EZ Vinyl/Tape Converter conveniently saves your recordings in your iTunes\* library. Novice users may find this application preferable. We have included a handy Software Quickstart Guide with step-by-step instructions on software installation and operation.
- **EZ Audio Converter (Mac only)** is a basic converter application for Mac OS X and is ideal for novice users. Please refer to the included Software Quickstart Guide for step-by-step instructions on software installation and operation.

To install the software: simply insert the included CD into your computer and follow the on-screen instructions. After you finish converting your vinyl, you can then burn to CD or load onto portable media devices.

## REAR PANEL FEATURES

1. **Power Cable:** This power cable should be plugged into a wall receptacle **AFTER** all audio connections are made.
2. **RCA Audio Output Cables:** These cables should be plugged into the audio inputs of your home stereo system. (Please note: you can still copy records to your iPod or computer, even if the audio outputs of the turntable are not connected to a stereo system).

**IMPORTANT WARNING: The RCA cables are LINE level. Please only connect these cables to LINE level inputs. You may damage your receiver if you plug in a LINE level into a PHONO input.**

3. **USB Audio Output:** Use the included USB Cable to connect your turntable to your computer. The USB connection will provide audio from the turntable and stereo input to your computer. For transferring your vinyl records to your computer, we have provided two different software packages on the included CD. EZ Vinyl/Tape Converter (PC) and EZ Audio Converter (Mac) are the easiest and quickest ways to transfer your vinyl records and should be used if you are a beginner.

## GENERAL CONTROLS

4. **Platter:** This platter must be securely fastened to the turntable prior to operation. The Motor Drive Belt can be found on the drive ring underneath the platter.
5. **45 RPM Adapter Holder:** Holds the included 45 RPM adapter. When not using the adapter, please place it in this holder.
6. **Stop Button:** This button stops the turntable motor.
7. **33 / 45 RPM Button:** This button controls the RPM of the turntable platter.
8. **Arm Clip:** This specially designed arm clip secures the tone arm while at rest or when not in use. The arm clip has been designed to remain in the up position while unlocked.
9. **Raise / Lower Lever –** Raises and lowers the tonearm.

### IMPORTANT

Make sure that the slipmat is always placed on top of the platter while using the turntable. Failure to use the slipmat may cause damage to your media as well as damage to the turntable.

Remove the plastic cartridge cover (needle cover) before operating the turntable.

## TROUBLESHOOTING

Refer to the following troubleshooting scenarios if you experience difficulty recording your vinyl to your computer.

PROBLEM	CAUSE	SOLUTION
I am not hearing any audio when I am recording.	Needle is not on the record.	Place the needle on the record.
	Turntable not powered.	Make sure that the turntable is connected to a live power outlet and that it is powered on.
	RCA outputs not connected to speaker system.	Make sure you have connected the turntable's RCA outputs to a speaker system and that the speaker system is powered on.
I am experiencing poor sound quality.	Cartridge connection is not secure.	Cartridge must be securely connected to the tonearm whenever you are using the turntable.
	Vinyl record is dirty or scratched.	Try dusting off and gently wiping the surface of the record before playing it.
When recording into my computer on Windows Vista, my recordings are mono instead of stereo.	Recording input properties in Vista not set to "stereo".	In Vista, you may need to manually specify "stereo" for the recording input. Go to <b>Start ► Control Panel ► Sound</b> (in Classic View). Then, click on the <b>Recording</b> tab and highlight the <b>Microphone</b> input (USB Audio Codec). Click on <b>Properties</b> to bring up the input settings. Next, click on the <b>Advanced</b> tab and select " <b>2 channel, 16 bit, 44100 Hz (CD quality)</b> " in the <b>Default Format</b> pull-down menu. Lastly, click <b>Apply</b> to accept the settings.
My music is playing at a strange pitch.	Incorrect speed selected on the turntable.	Make sure that you are playing your records at the speed they were intended to be played. Select between the two different speeds by pressing <b>33RPM</b> or <b>45RPM</b> .
