TD-9 Percussion Sound Module USB MEMORY

The Next-Generation V-Drums Module

The TD-9 is the anchor of Roland's new mid-line V-Drums kits. With hundreds of new sounds, real-audio songs and patterns onboard, plus new Scope and Quick Rec/Quick Play practice functions, full V-Hi-Hat (VH-11) compatibility, and three-way ride triggering available, the TD-9 raises the bar significantly in its price range.

Note: Playable audio files by USB Host via wav-file format.

Fast, Friendly, Fun

No more squinting at a small screen — the TD-9 is outfitted with a luxurious, large backlit display with accompanying oversized buttons and controls. Its friendly, icon-based user interface makes editing sounds and customizing kits fast and fun.

Interactive Innovation

Play along with real-audio backing songs to build your musical experience base. Use the USB port to import audio files of your choice (.WAV), back up your data, or save a "quick record" performance. The "Quick Record" and "Quick Play" features allow you to immediately record and play back solo drum parts, or drum parts performed with the backing songs. Special connecting cable allows for fast, clean and easy connection to the pads.

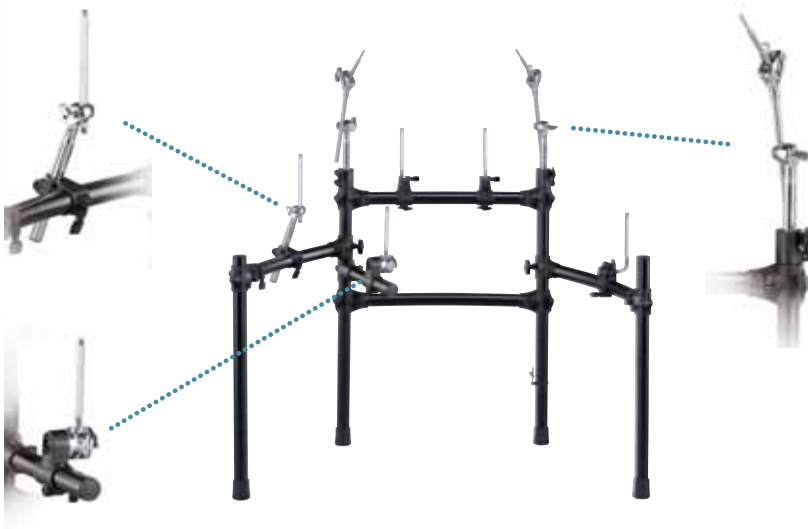

MDS-9 Drum Stand

The new MDS-9 drum rack offers a sturdy four-leg design with new, improved ball-joint snare and cymbal mounts, and a new hi-hat mount for fast, flexible component placement.

Convenience & Stability

Whether you're in search of a clean, streamlined setup for your home or a strong rack for gigs that sets up and tears down fast, the new MDS-9 delivers.

Notes: The MDS-9 is specially designed in conjunction with the newest V-Drums kit (TD-9SX/TD-9S). It does not include a mounting plate for sound-module attachment.
