

EP2 EXPRESSION PEDAL

The EP2 Expression Pedal designed by Moog is the finest expression pedal available. Its smooth action gives it the feel musicians need for precise, playable control.

The heavy construction (2.55 lbs) provides a solid feel as the pedal stays firmly under-foot.

A new external output level control adjusts the range of the pedal's effect; sweeping across the full or a limited spectrum.

Usage:

A foot controller designed to enhance the expressive capabilities of the Minimoog Voyager, Little Phatty, Moogerfoogers and more. Connect to a control voltage input on any of your Moog equipment, adjust the attenuator for desired range and start playing!

Application Suggestions:

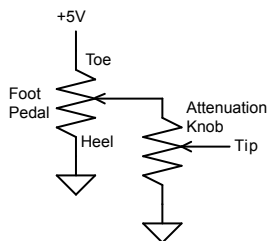

Connect to the Rate control input of your MF-105 MuRF. Set Rate control in middle of desired range. Adjust attenuator for total range in toe position.

Connect to the Frequency control input of the MF-102 Ring Modulator. Set Frequency control for minimum desired setting. Adjust attenuator for maximum desired setting in toe position.
