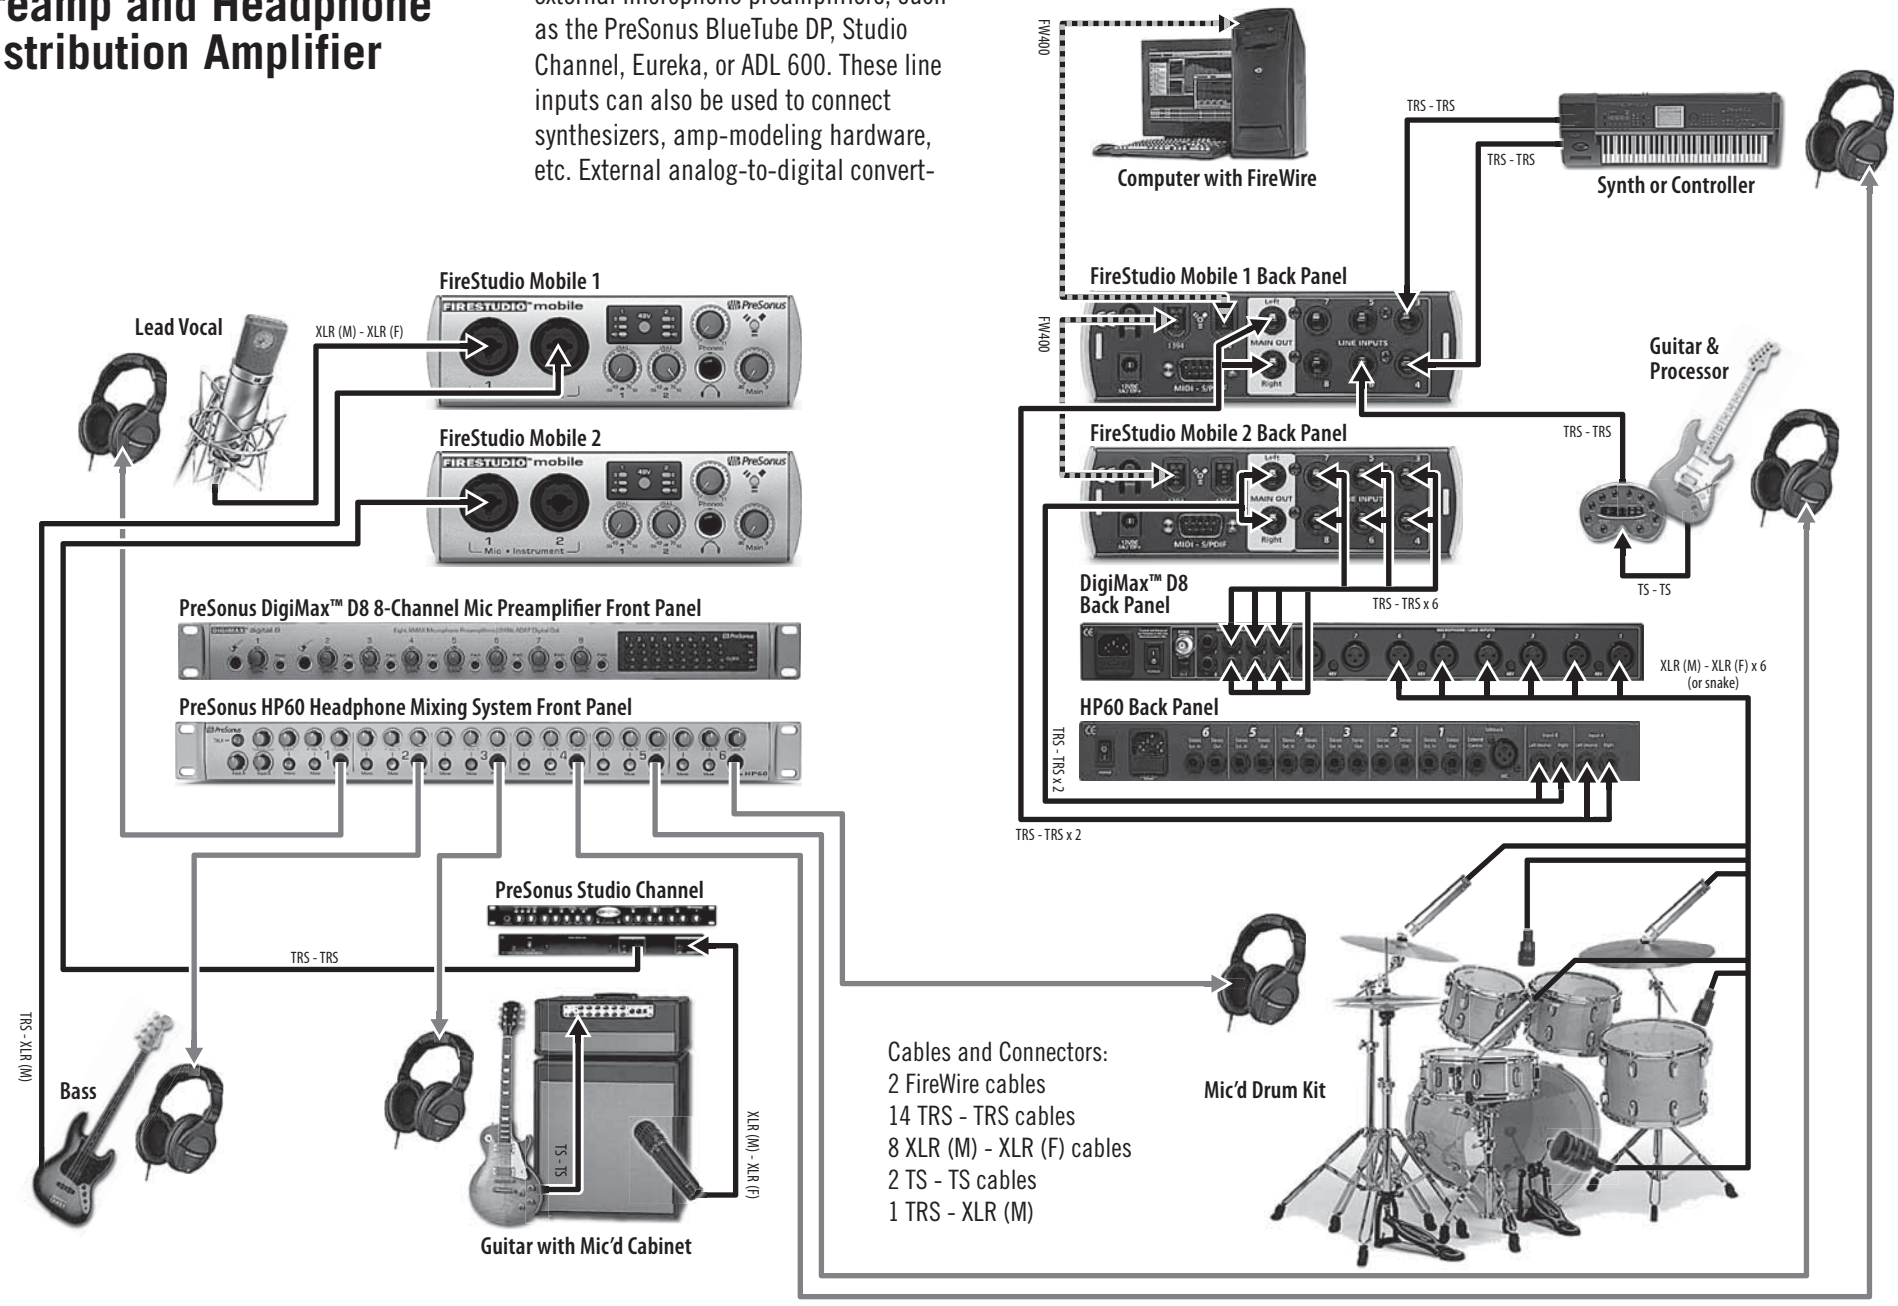
Recording a Full Band with Two FireStudio Mobiles, External Multichannel Preamp and Headphone Distribution Amplifier

The FireStudio Mobile enables you to simultaneously record and play back up to ten channels. You can plug two microphones directly into the FireStudio Mobile's two preamplifiers and can use the line- level inputs to connect external microphone preamplifiers, such as the PreSonus BlueTube DP, Studio Channel, Eureka, or ADL 600. These line inputs can also be used to connect synthesizers, amp-modeling hardware, etc. External analog-to-digital converters can connect to the S/PDIF inputs. This makes recording extremely easy. All you need are microphones, cables, and monitor speakers.

PreSonus



Cables and Connectors:
2 FireWire cables
14 TRS - TRS cables
8 XLR (M) - XLR (F) cables
2 TS - TS cables
1 TRS - XLR (M)
