

# TAMA®

## Power Glide

Features a double-chained offset cam which increases power and speed as the beater reaches the end of the stroke.

## New Bearing Housing

This bearing housing produces less stress on the bearings and therefore provides lighter and smoother pedal action.

HP900PSN

## Rolling Glide

Features a true round-shaped sprocket with a double chain for more durability, while still providing the smooth, uniform response of the traditional round cam.

## Flexi Glide

Many players still love the "floating" action of a strap pedal. The Flexi Glide pedal features a strap made of Dupont ©Kevlar, much more durable than the old style nylon and leather straps.

(©Kevlar is a registered trademark of the Dupont Corporation.)

## Carrying Case

Available: May 2011

# Rock Solid Strength and Versatility!

*The iconic Iron Cobra footboard design, morphed and streamlined for 2011.*

The new smoother design reduces footboard friction. This allows for more sensitivity, precision and control while addressing a wide range of playing styles and techniques.

Tama engineers are a restless lot.

Even though tens of thousands of drummers have put their trust in the Iron Cobra for over a decade, its improvement has been unending.

The 2011 model is the sum total of dozens of enhancements that, when added up, make for one of the best-known bass drum pedals in drum history.

## More Durable Hinge

OILES Bearings are one of the most important features of the Iron Cobra. To reinforce its durability, we increased the shaft's thickness from 5mm to 6mm.

### New Hi-Hat Clutch Minimal Cymbal Contact

Minimizing the contact area between the clutch and top hi-hat cymbal increases the hi-hat cymbal's natural resonance. In place of the traditional felt washer, we created a special nylon washer that minimizes cymbal contact, allowing the cymbal to vibrate to its fullest.

\*HH905N & HH805N also includes your choice of traditional felt washers.

HH805N

HH905N

## 2011 Iron Cobra Hi-Hat Stands

### Spring Supported Hi-Hat Seat

The spring assembly in the hi-hat seat tilts the bottom cymbal only when you open the hi-hat cymbals. By adjusting the spring tension, you can adjust the angle to achieve your preferred degree of half-open sound or closed sound.

### More Precise Spring Tension Adjustment

Spring tension of the Iron Cobra Hi-hat stands can now be adjusted easily with a single hand. Incremental tension settings are increased to six, allowing every drummer to dial up the perfect resistance level.

**Available: May 2011**
