

# energyXT2.5 energyXT2.5 Plus

## Digital Audio Workstation

### energyXT2.5

- All you need to create music on your PC or MAC
- Perfect for composers, musicians, DJs, vocalists, and producers of all styles
- Complete "Studio On The Go" – take the fully-portable energyXT2.5 and all your songs with you on the included USB flash drive
- Smart and innovative audio and MIDI sequencer
- Minimal loading time, no need to install. Record your inspiration on the spur of the moment
- Create, save, export and play your own music on the included USB flash drive, on your PC's hard drive or any mobile storage unit
- High-performance 32bit/192kHz full-duplex audio engine with low-latency support, 32 I/O, WAV, AIF, MP3, REX2, and MIDI file formats
- Ultra-flexible Audio/MIDI engine supports time-stretching, automation and MIDI learn functions for sequencer, mixer and plug-ins
- Soft mixer with virtually unlimited channels for audio, MIDI, effects returns and subgroups
- Fully configurable virtual FX/synth rack, ideal for live performances, including guitar and keyboard setups
- Native drum machine and synth/sampler plus full VSTi support
- On-board FX processors for EQ, reverb, chorus and more, with full support for VST effects
- Multi-track export function for importing projects into other DAWs
- Tabbed interface for docking VST plug-in editors
- Intuitive drag-and-drop operation
- Multi-language quick start guide
- VST ported – load energyXT2.5 as a VST plug-in within any VST host software (Windows only)
- Skinnable, streamlined user interface

### energyXT2.5 Plus

- ReWire-Energizer function support — neatly hosts and controls ReWire compatible applications such as Reason or Ableton Live
- 2 GB extra-high speed USB flash drive included

## Computer Based Recording / Software

Ultra-Portable Music Production  
and Recording Software for Windows,  
Mac and Linux

xtsoftware

### Do We Really Need Another Recording Program?

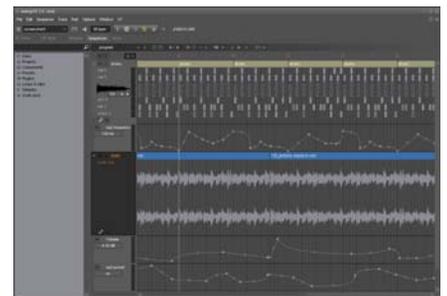

Yes, when it's this unique. In the world of bloated, resource-hungry music production software, energyXT2.5 is like a breath of fresh air.

Imagine a digital audio workstation program that opens in mere seconds from a thumb drive that can be transported from computer to computer — even between Windows (including Vista), Mac OSX, and Linux operating systems. energyXT2.5 is a compact, easy to learn and use "Studio On-the-Go." You can take it and your project files to a friend's house, or to a professional recording studio on the included USB drive. You can even multi-track export your recording from energyXT2.5 to all other DAWs.

energyXT2.5 also features its own bevy of synthesizers, including one that functions as a dedicated drum track. With its top-quality sound and speed, energyXT2.5 lets you Create Music Now!

### energyXT2.5— everything you need for digital recording

Transferring music ideas from your soul to an MP3 shouldn't be a Herculean task. And it shouldn't take weeks in the studio and wads of cash to make your tunes a reality. energyXT2.5 allows you to record instruments and vocals directly to your computer via a simple USB interface. You are then free to copy and paste tracks, as well as edit, add effects and mix them to your heart's content, with stunningly professional results. energyXT2.5 makes it easy to take your music from a simple concept to a high-quality, finished masterpiece you can play, share and even upload to your favorite music site.

# energyXT2.5 energyXT2.5 Plus

## Digital Audio Workstation

### Ultra-portable Studio with Intuitive Workflow

energyXT2.5 opens in seconds from the included high-speed USB stick. You don't even have to install the software since it runs directly from the USB drive.

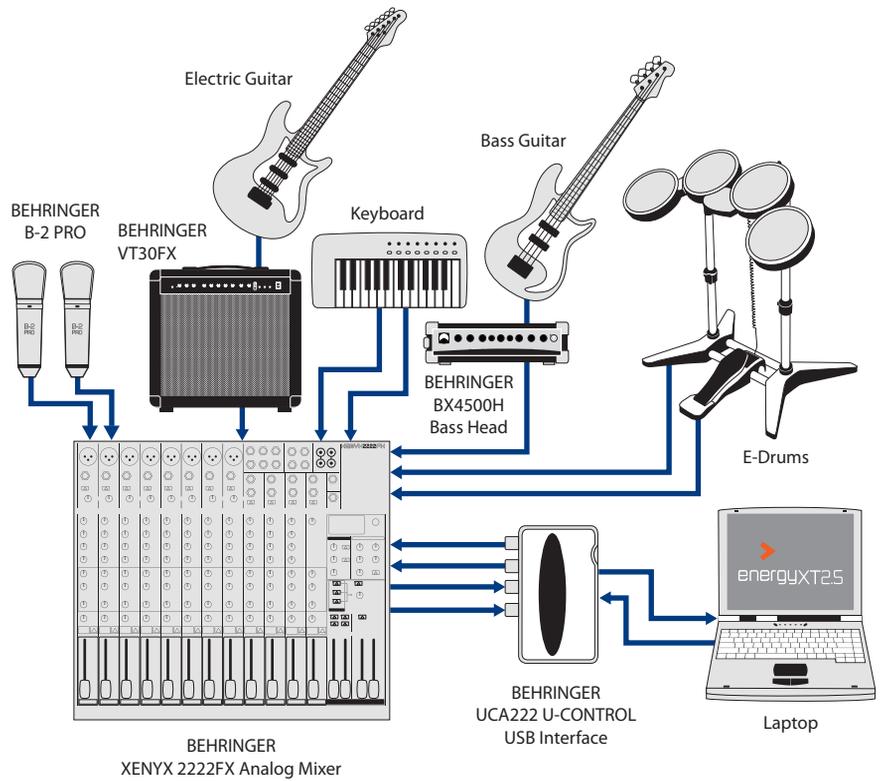

With energyXT2.5, you can bring your projects to colleagues or friends on the stick and leave your valuable equipment at home — just export your projects to the DAW used wherever you go.

Built for musicians by musicians, energyXT2.5 is easy to learn, logical to create music in and, most importantly, is designed to support your creativity. The way you make music will feel different with energyXT2.5, because you won't be bogged down in menus — you'll be able to focus your energy on music creation. Put simply, energyXT2.5 unleashes your creativity, letting your music flow.

### Slow Computer, Fast Computer; Old Computer, New Computer

Even if you don't have the latest, greatest computer, with truckloads of RAM and all the "bells and whistles," you can still lay down killer tracks with energyXT2.5 Built-in professional features like Freeze and Bounce to Audio Track so lightly from your CPU, you'll hardly know they're even running. You can create, mix and record professional quality music with a minimal amount of equipment and computing horsepower with energyXT2.5.

energyXT2.5 runs on virtually ALL up-to-date computers which meet the system requirements, so it doesn't matter if you use a tower PC, laptop, MacBook or iMac. Operation is independent of the OS, meaning it runs equally well on Windows XP, Vista, Mac OS X or Linux systems, such as Ubuntu. energyXT2.5 even runs on most netbooks!

### So Easy to Use

# energyXT2.5 energyXT2.5 Plus

## Digital Audio Workstation

There is no huge manual to read with energyXT2.5 — you'll be tracking and mixing in no time flat, thanks to its easy-to-understand interface and simple drag & drop clip manipulation. One thing you'll notice right away is that energyXT2.5 is laid out in beats and measures, just like music. energyXT2.5 gives you the tools to make music, without the hassles and steep learning curve associated with most recording and production software packages.

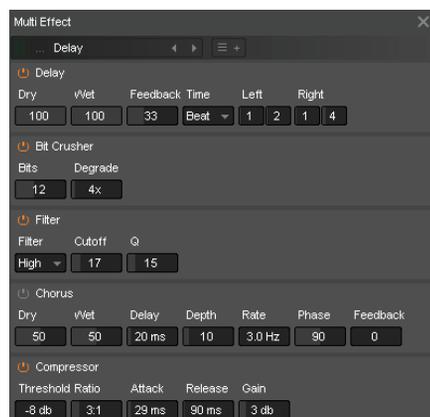

### energyXT2.5 is Supremely "Mobile"

Of course, depending on your hardware, energyXT2.5 will run on nearly any mobile device including external hard-drives, USB pen drives, SD cards, and so on. You can even copy the complete software program onto your MP3 player or the memory stick of your cell phone, so you can always have energyXT2.5 with you!

### energyXT2.5 Even Provides The Instruments

You don't even need an instrument to get started, thanks to energyXT2.5's internal synthesizer/sampler and drum machine. These awesome tone generators build keyboard parts, pads, bass lines, and more. You can either step-write synthesizer parts or use an external MIDI instrument for real-time recording — and opt to use the onboard sounds or import your own. If you have a DAW controller at your disposal, you can use it to control virtual instrument tracks, as well as many of energyXT2.5's mixer functions. And recording live instruments with energyXT2.5 is a breeze; just plug a guitar or microphone into a USB-equipped mixer and lay down tracks to your heart's content.

### Built-In FX

Delay, reverb, phaser and chorus effects are built right into energyXT2.5, so you won't need racks and racks of outboard gear to sweeten your tracks. In addition to all of these user-addressable effects, energyXT2.5 is brimming with tonal enhancement, including a 4-band EQ on every channel, each band of which can be configured as LSH (low shelf), PEQ (parametric), HSH (high shelf), LPF (low pass filter) or HPF (high pass filter). And if that's not enough, energyXT2.5 supports industry standard VST effects. Try to find that kind of versatility on a hardware-style mixer!

### Sequencer

The sequencer inside energyXT2.5 works in much the same way as in most DAWs and offers everything you have come to expect: audio recording, different track types, drum loops and clip-based automation of mixer/EQ and VST plug-ins. It also has unique features

like drum-machine track, per audio clip resample, elastic time-stretching and modeless editing for lightning fast workflow. Tracks can be arranged into folders to save screen space and VST plug-in editors can be docked into separate tabs.

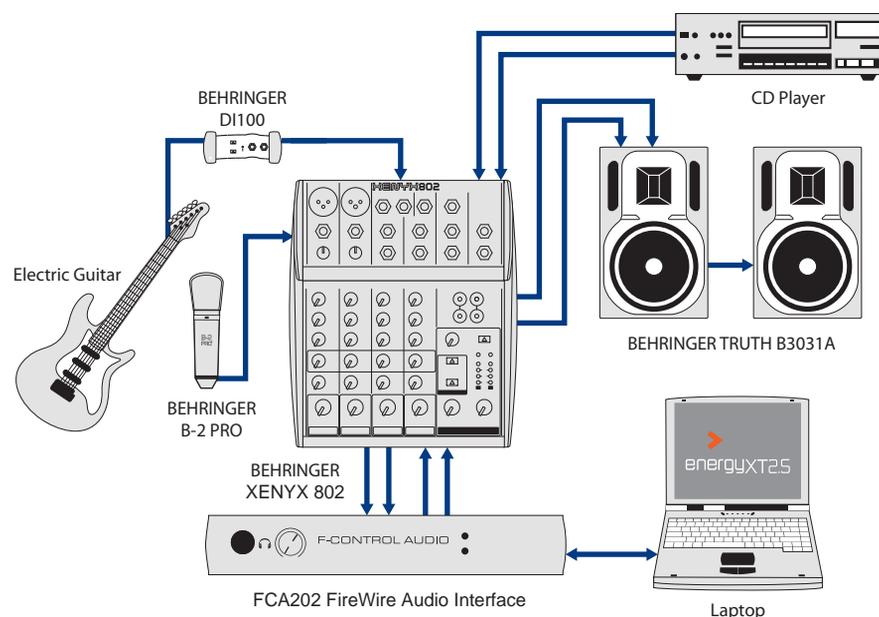

You can open as many sequencers or mixers inside energyXT2.5 as you like. This allows you to run complex loops, which are always in sync with the other, or "main" sequencer. You can even run the sequencers as two turntables! The energyXT2.5 VST version also works as a plug-in, inside energyXT2.5 itself. And it doesn't matter if your host supports VST effects, VST instruments, or both — you can use energyXT as a plug-in on *any* VST host. The possibilities are virtually endless!

### Synthesizer/Sampler

The built-in synth/sampler is a phase modulation synthesizer and sample player in one. You can layer and

*Continued on next page*

# energyXT2.5 energyXT2.5 Plus

## Digital Audio Workstation

split synthesized and sampled sounds any way you want. There are all the standard features like multi-mode filter, LFO's, vibrato and glide. Add per sound phaser/chorus/flanger and per program reverb and delay effects, and you have yourself a complete workstation, with sound that's extremely warm and clean.

You can easily drag & drop WAV files into the synthesizer, create multi-layers with different key and velocity ranges and much more. Here are just a few potential uses of this powerful tool:

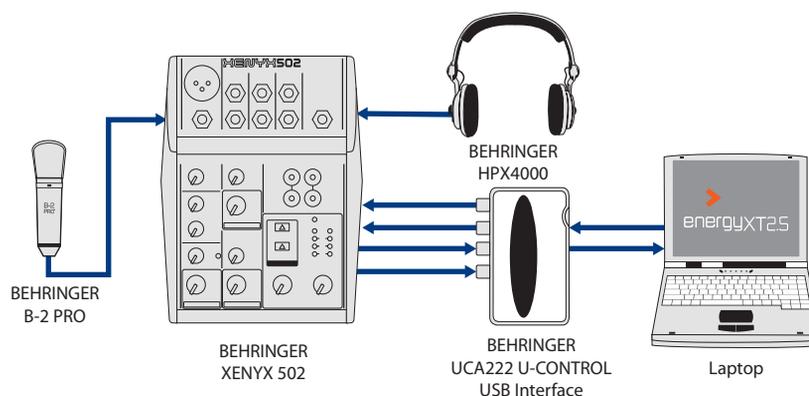

- Virtual-analog or phase-modulated synthesizer
- Synthesizer with added FX-samples (e.g. sampled noise effects or drumloops, triggered via the synth engine)
- Multi-layer sound sampler (similar to the old-fashioned hardware samplers of yesteryear)
- Use the multi-layering capability to create your own Grand Piano layers!

### Drum Track

The drum track feature in energyXT2.5 works just like a built-in drum sampler. The drum editor looks like a real drum machine and samples can be dragged and dropped right into it for quick drum set construction. The resulting drumsets can even be saved as presets. To create a new drum track, simply drag a drum set or a WAV file into the sequencer, and the track is created for you automatically. Want to make a drum loop library? Just right-click any drum part in your project and save it as a single file for use in future projects.

## Podcast Setup

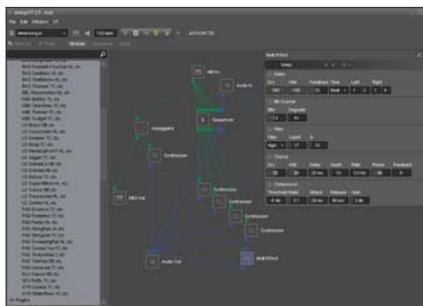

### Mixer

Most settings in the main mixer can be automated from the sequencer, including volume, pan, mute, EQ and effect parameters. There is no limit to how many insert and send effects you can use in a project, except for your CPU. Group channels are available for sub mixing. These channels can be automated just like normal mixer channels, and will support insert and send effects as well. The mixer is dockable, and presets for different mixer views can be customized.

### Browser

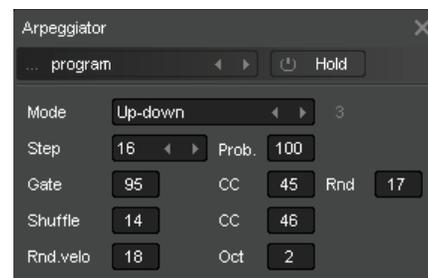

VST plug-ins, samples and presets can be dragged into the sequencer tracks and mixer effect slots.

energyXT2.5 will auto-detect if you drop a VST instrument into the sequencer, create a new MIDI track and connect it to the instruments automatically. The same thing happens if you drop in a drum sample—the drum track is created for you, ready to play!

### Modular Environment

energyXT2.5 offers a modular design feature. The Modular view allows you to visualize all the VST plug-ins, sequencers and audio inputs/outputs used in your project. In this view, you can easily set up energyXT2.5 as a standalone effects processor. Just drop a few effects into the Modular view, route the audio input through the effect plug-ins and then to the master out. And energyXT2.5 makes an outstanding effects processor for live guitar or keyboard setups.

### Built-in Arpeggiator

An outstanding feature in energyXT2.5 is the Arpeggiator, which steps through the sequence of notes you have played on your MIDI keyboard (or are playing back from a MIDI track), and plays them back in sync with the tempo of the song. Arpeggios work great for everything

*Continued on next page*

# energyXT2.5 energyXT2.5 Plus

## Digital Audio Workstation

from basslines to chords and background melody lines, and are often played live from a MIDI keyboard. And the Random and Swing functions can be employed, giving these arpeggiated parts a more unique, "human" feel. The Arpeggiator is available on MIDI tracks in the sequencer, as well as a Classic Arp component in the Modular view.

### energyXT2.5 also works with loops

Loops are MIDI, audio or drum parts that have been saved as files. You can easily create and manage your own loops library and re-use the files in new projects. One of the best things about loops is the ability to save VST patches with it. This means that if you save a bass part with your favorite VST instrument (or the built-in synthesizer) and later drag the file into a new project, not only does it load the bass pattern, but it also loads the VST instrument and the patch automatically.

### Time-Stretching and Pitch-Shifting

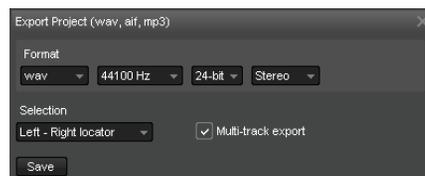

The advanced thread-based audio engine in energyXT2.5 lets you stretch, change the pitch and reverse audio clips in real-time. energyXT2.5 features the high-quality elastique time-stretching algorithm from plane development. With it you can resample audio clips and choose between Normal, Re-pitch and Stretch modes.

- **Normal** – the audio clip is played back using the sample rate of the file. You can alter the speed of the playback by modifying the coarse and fine-tuning controls.
- **Re-pitch** – the playback speed of the audio clip is locked to tempo. Slowing down the tempo will play the sample slower. The length of the audio clips can still be

changed, and can create some very interesting grooves.

- **Stretch** – the playback is locked to tempo, just like in Re-pitch mode, but the pitch of the sample will not change when tempo is changed. In addition, you have coarse and fine-tune for pitch-shifting the audio clips without changing the playback speed.

### Output Options

When you've finished creating and mixing your masterpiece, all you need do is select File/Export Project to WAV, and choose the format you wish to use. Files can be exported as mono/stereo WAV or AIF, with sample rates ranging from 16-bit/22.050 kHz to 32-bit/192.000 kHz. When exported, a 3-minute song's file size can range from under 8 MB for 16-bit mono/22.050 kHz to 270 MB (32-bit stereo/192 kHz). The same 3-minute song, rendered at 24-bit/44.1 kHz stereo (CD quality) would be about 46 MB, and only 4.6 MB when formatted for mp3.

*Note: MP3 files can also be imported (drag & drop) and exported if LAME.exe is installed to the energyXT folder. (LAME.exe is not included with energyXT2.5, however it is available as a free download).*

### energyXT2.5 PLUS kicks it up a notch...

The energyXT2.5 PLUS edition includes technology to expand ReWire compatible devices (such as Reason Virtual Studio Rack) with audio recording, VST instruments and effects. Use energyXT2.5 PLUS as the fastest-launching ReWire master solution for your favorite ReWire software, with super-flexible audio and MIDI routing of ReWire instruments, support for multi-channel audio, and up to 128 MIDI to bus/channel mapping. You get the option of synchronizing playback of both applications, or only using the

fully-fledged sequencer inside energyXT2.5 PLUS.

### Sometimes Bigger is Better...

Because of its expanded functionality, energyXT2.5 PLUS comes with an extra gigabyte of storage space on the included high-speed USB flash drive, for a total of 2 GB. That should give you more than enough room for even the largest project files. Of course, energyXT2.5 PLUS is already installed on the USB drive and ready for deployment on whatever computer you choose.

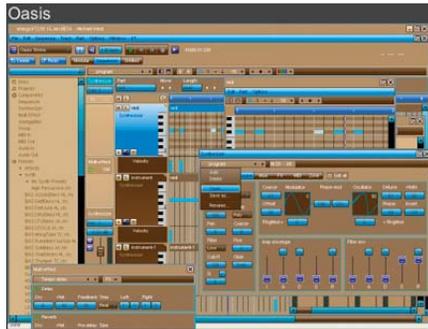

### State-of-the-Industry Support

As we alluded to before, you won't get bogged down in massive, mind-numbing manuals with energyXT2.5. There is however, a Quick Start Guide, a small, well thought-out User's Guide and the online XT User Community to help you sort things out, if you do get stuck. The XT User Community is a tremendous resource, with tons of information about virtually any situation you might run into. Go ahead, just try to stump them; those folks live for a challenge!
