User’s Manual

Version 1.0  January 2006

www.behringer.com
U-CONTROL UMX49/UMX61

IMPORTANT SAFETY PRECAUTIONS

**CAUTION:** To reduce the risk of electric shock, do not remove the cover (or back). No user-serviceable parts inside; refer servicing to qualified personnel. Only qualified personnel may perform repairs.

**WARNING:** The apparatus shall not be exposed to dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on the apparatus.

This symbol, wherever it appears, alerts you to the presence of uninsulated dangerous voltage inside the enclosure—voltage that may be sufficient to constitute a risk of shock.

This symbol, wherever it appears, alerts you to important operating and maintenance instructions in the accompanying literature. Please read the manual.

**DETAILED SAFETY INSTRUCTIONS:**

1) Read these instructions.

2) Keep these instructions.

3) Heed all warnings.

4) Follow all instructions.

5) Do not use this apparatus near water.

6) Clean only with dry cloth.

7) Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.

8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.

9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.

10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.

11) Only use attachments/accessories specified by the manufacturer.

12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

13) Unplug this apparatus during lightning storms or when unused for long periods of time.

14) Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

15) **CAUTION -** These service instructions are for use by qualified service personnel only. To reduce the risk of electric shock do not perform any servicing other than that contained in the operation instructions unless you are qualified to do so.
U-CONTROL UMX49/UMX61

The Ultimate Studio in a Box: 49-Key USB/MIDI Controller Keyboard with USB/Audio Interface, 50 Software Instruments and Ableton® Live Lite 4 BEHRINGER Edition

- Unleash your creativity and play 50 virtual instruments and synthesizers, take off with an unlimited number of sound creations. Download more free instrument plug-ins and host software from www.behringer.com
- Velocity-sensitive USB/MIDI keyboard featuring 49 full-size keys and unbeatable programming versatility, real-time control and playability
- USB/audio interface to connect your instruments and mixer, etc. to your computer for recording and playback
- Powerful DAW software Ableton® Live Lite 4 BEHRINGER Edition included
- Plug and play with Mac OS® X and Windows XP®
- 8 real-time rotary controls plus 10 assignable switches
- Freely assign MIDI control changes to the modulation wheel, volume fader and pedal port for ultimate flexibility
- Full 128 tone range via the octave shift function with multi-purpose LED status indication
- Separate MIDI Out allows controlling external samplers, synths and other equipment
- Runs via USB bus, batteries or a power adapter (not included)
- High-quality components and exceptionally rugged construction ensure long life
- Conceived and designed by BEHRINGER Germany

* All trademarks mentioned belong to their respective owners and are not affiliated with BEHRINGER®
U-CONTROL UMX49/UMX61

Dear Customer,

welcome to the team of BEHRINGER users, and thank you very much for expressing your confidence in us by purchasing the U-CONTROL.

Writing this foreword for you gives me great pleasure, because it represents the culmination of many months of hard work delivered by our engineering team to achieve a very ambitious goal: With the UMX we present you our first keyboard which, thanks to its flexibility, can be used on stage as a master keyboard controller as well as a pure MIDI controller.

The task of designing our new U-CONTROL certainly meant a great deal of responsibility, which we assumed by focusing on you, the discerning user and musician. Meeting your expectations also meant a lot of work and night shifts. But it was fun, too. Developing a product usually brings a lot of people together, and what a great feeling it is when all who participated in such a project can be proud of what they’ve achieved.

It is our philosophy to share our enjoyment with you, because you are the most important member of the BEHRINGER team. With your highly competent suggestions for new products you’ve made a significant contribution to shaping our company and making it successful. In return, we guarantee you uncompromising quality as well as excellent technical and audio properties at an extremely reasonable price. All of this will enable you to give free rein to your creativity without being hampered by budget constraints.

We are often asked how we manage to produce such high-quality devices at such unbelievably low prices. The answer is quite simple: it’s you, our customers! Many satisfied customers mean large sales volumes enabling us to get better purchasing terms for components, etc. Isn’t it only fair to pass this benefit on to you? Because we know that your success is our success too!

I would like to thank all of you who have made the B-CONTROL possible. You have all made your own personal contributions, from the developers to the many other employees at this company, and to you, the BEHRINGER user.

My friends, it’s been worth the effort!

Thank you very much,

Uli Behringer

1. INTRODUCTION

Thank you for showing your confidence in BEHRINGER products by purchasing the UMX. The UMX is an extremely flexible master keyboard with a controller unit that can be used for a wide array of applications. Whether you need independent control of computer rack synthesizers, general MIDI sound modules or effects devices, or want to use the UMX for conveniently operating sequencing software or computer plug-ins – the UMX offers you tremendous ease of use and allows you to realize your ideas intuitively.

The following user’s manual is intended to familiarize you with the unit’s control elements, so that you can master all the functions. After having thoroughly read the user’s manual, store it at a safe place for future reference.

1.1 Before you get started

1.1.1 Shipment

The U-CONTROL was carefully packed at the assembly plant to assure secure transport. Should the condition of the cardboard box suggest that damage may have taken place, please inspect the unit immediately and look for physical indications of damage.

Damaged equipment should NEVER be sent directly to us. Please inform the dealer from whom you acquired the unit immediately as well as the transportation company from which you took delivery of the unit. Otherwise, all claims for replacement/repair may be rendered invalid.

To assure optimal protection of your UMX during transport, we recommend utilizing a carrying case.

Please always use the original packaging to avoid damage due to storage or shipping.

Never let unsupervised children play with the B-CONTROL or with its packaging.

Please dispose of all packaging materials in an environmentally-friendly fashion.

1.1.2 Initial operation and power supply

Please make sure that the unit is provided with sufficient ventilation, and never place the UMX on top of an amplifier or in the vicinity of a heater to avoid the risk of overheating.

The power supply can be realized in different ways depending on the main application area: For the installation of the UMX in a studio environment, it is possible to connect the device directly to a free USB port of the computer using the USB cable provided (see fig. 1.1).

In case it is not possible to establish the power supply over USB (e.g. because of an overload of the host computer due to several USB devices connected), it is also possible to operate the UMX with three 1.5-Volt batteries (type “AA”, see fig. 1.2).

After inserting the batteries, please close the battery compartment and make sure the shutter clamp snaps into place again.

If you do neither want to connect the power supply over USB nor operate the unit with batteries, there is yet another possibility to connect the UMX over an external power pack. Best suited here is the BEHRINGER POWERSUPPLY PSU-SB. If you use a different power supply, please observe the correct operational data (9 V DC; 100 mA) and correct polarity of the connector plug; you will find information about this above the DC input on the rear of the unit. Reverse polarity can damage the electronics.

1.1.3 Online registration

Please, do remember to register your new BEHRINGER equipment right after your purchase by visiting www.behringer.com (alternatively www.behringer.de) and kindly read the terms and conditions of our warranty carefully.
U-CONTROL UMX49/UMX61

Should your BEHRINGER product malfunction, our goal is to have it repaired as quickly as possible. To arrange for warranty service, please contact the retailer from whom the equipment was purchased. Should your BEHRINGER dealer not be located in your vicinity, you may directly contact one of our subsidiaries. Corresponding contact information is included in the original equipment packaging (Global Contact Information/European Contact Information). Should your country not be listed, please contact the distributor nearest you. A list of distributors can be found in the support area of our website (www.behringer.com).

Registering your purchase and equipment with us helps us process your repair claims quicker and more efficiently.

Thank you for your cooperation!

1.2 System requirements

For USB operation, a current WINDOWS® PC or MAC® with a USB connection is sufficient. Both USB 1.1 and USB 2.0 are supported.

The UMX supports the USB MIDI compatibility of WINDOWS® XP and MAC OS X® operating systems.

The UMX can also be operated as a stand-alone MIDI controller with no PC connected. Software control via MIDI is also possible, provided your computer has a MIDI interface.

2. INTRODUCTION TO MIDI

2.1 MIDI control for beginners

Application possibilities for the UMX models are truly wide-ranging. We’ll start with a couple of general explanations and examples that should quickly let you get a good understanding of MIDI basics.

The definition of the MIDI standard began in 1982 with the cooperation of various international companies (MIDI: Musical Instruments Digital Interface). At that time, musicians were looking for a possibility of managing the communication of electronic musical instruments of different makes with one another.

What exactly does the UMX do?

Simply put, this a remote control for all kinds of MIDI equipment. Using the faders, encoders and buttons, the foot pedal and the keyboard, an entire array of control instructions can be transferred to external devices over a data link. Thus, for example, the VOLUME/DATA fader is programmed ex works to send data controlling the volume level of a channel.

What kinds of equipment can I control with the UMX?

You can basically control any device supporting the MIDI format. Both hardware and software MIDI devices are controlled in exactly the same way. The only difference is in the wiring.

Here are a couple of suggestions on how you can use your UMX:

- Editing sound parameters of (virtual) synthesizers, sound samplers, GM/GS/XG sound generators
- Controlling parameters on effects equipment/software plugins such as effects processors, reverbs, compressors, equalizers etc.
- Remotely controlling software mixers (volume, panorama, mute functions, etc.)
- Remotely controlling transport functions (playback, forward, stop etc.) on sequencers, hard disk recorders, drum computers etc.
- Live control of volume and sound parameters on expanders

- Remotely controlling groove boxes, step sequencers, MIDI generators and other “live” software
- Program changes and volume control on sound generators (just like on a master keyboard)
- Can be used by band keyboardists, solo entertainers, organists, electronic music performers, DJs, sound engineers, home/project studio owners, theater technicians etc. alike

And how does it work?

Remote control is realized by assigning the individual control elements of the UMX to individual MIDI parameters. Whenever one of these control elements is operated, the UMX generates the control data assigned to this control element, which are then transferred to external devices over a data link. Thus, for example, the VOLUME/DATA fader is programmed ex works to send data controlling the volume level of a channel.

The data connection is usually a standard MIDI cable with a 5-pole DIN plug on each end. Such cables should not exceed a length of 15 meters. With the UMX there is one more data connection available: the USB cable to the host computer. Here, the cable should not exceed a length of 5 meters.

The data transmission takes place over 16 channels. The control data generated by the individual control elements are also called MIDI messages, which can be divided into 3 major groups:

- **Channel Messages**: Here, channel-specific control information is transmitted. An example of a channel message is the note-on instruction. As soon as a key is played on the keyboard of the UMX, the device generates an instruction which contains the pitch, channel number and velocity. The receiving sound generator “knows” which tone has to be played.

- **System Messages**: These messages are not channel-specific but relate to the entire system to which they are sent. They are divided into 3 groups: System Exclusive Messages (for operating system backup, updates, management of memory contents); System Real-Time Messages (e.g. for remote control of other devices); System Common Messages (e.g. for the synchronization of several devices).

- **Control Messages**: Also known as Control Changes or Controllers, abbreviated as “CC... controller number”.

There are 128 controllers in total, which are numbered from 0 to 127.

Please refer to the table on page 16 to find out which type of controller you are currently working with.

MIDI data are only control data and contain no audible audio information! The data transmission takes place over 16 channels.

What settings do I have to make? Where? How?

Basically, which control element generates which controller must be set on the UMX, and how arriving controller commands should be interpreted must be set on the receiving device. Regarding controller assignment, there are two possible principles:

- You use the preset controller configuration set in the factory (see fig. 2.1). In this case, you only need to make the assignments on the receiving device.
- You use your own controller configuration set up in ASSIGN mode. How to assign controllers to the UMX is described in chapter 4 “operation”.

2. INTRODUCTION TO MIDI
2.2 USB mode and stand-alone operation

The UMX can be operated as a USB interface or stand-alone device. The two modes are different with respect to the MIDI signal flow.

2.2.1 USB mode

When the UMX is linked via USB to a computer, the signal flow is as shown below (fig. 2.1).

![Block diagram of MIDI signal flow](image)

After the UMX has been connected to the host computer, a virtual MIDI IN and MIDI OUT interface is emulated. MIDI data generated in the UMX are first sent over the USB interface to the host computer, where they are received at the emulated MIDI IN. A sequencer software running on the host computer receives the MIDI data via the USB interface on the computer/UMX, where they are looped through to the physical MIDI OUT. From here, the MIDI data are sent to the devices connected to the MIDI OUT.

The MIDI OUT connector can also be used as a normal MIDI interface, independently of the sequencer software operating the UMX.

2.2.2 Stand-alone operation

When the UMX25 is not linked via USB to a computer, it is automatically set to stand-alone mode. In this case, the UMX25 can only send out MIDI data from its MIDI OUT connector.

3. CONTROL ELEMENTS AND CONNECTIONS

The following factory settings refer to GLOBAL MIDI channel 1.

The keyboard of the UMX25: 25 large, velocity-sensitive keys for maximum playing comfort. The keyboard not only provides for playing, but also functions as an encoder in the context of the assignment procedure.

Ex works, the VOLUME/DATA fader controls the volume of the notes played on the keyboard (MIDI CC 7). In ASSIGN mode, it can be set to control any MIDI controller.

The ASSIGN button allows you to assign different functions to the various control elements.

The basic principle is always the same:

1) Press the ASSIGN button and keep it pressed. The status LED above the button lights up. The UMX signals that it has entered ASSIGN mode.

2) Select the control element to which you would like to assign a new MIDI function by operating it.

3) Release the ASSIGN button.

4) Depending on the choice you made, you may have to define an additional value range (see below for more details).

5) Press the ENTER-Taste button on the keyboard to confirm your assignments. To discard your assignments either press the CANCEL-button or the ASSIGN button again. In either case the ASSIGN LED goes out and the UMX quits ASSIGN mode.

The USER MEMORY button is used to recall the internal memory. The internal memory contains all assignment information set in ASSIGN mode. Any changes that were made after USER MEMORY selection are automatically saved without further user prompts. The USER MEMORY is retained even after the unit is switched off.

The two OCTAVE SHIFT buttons are preset to shift the keyboard range by up to three octaves up or down. The associated LEDs help you identify the current octave setting (see table 3.1). Since the OCTAVE SHIFT buttons can also be assigned to any MIDI controller, we would like to refer you to chapters 4.2.8 and 4.2.9 for detailed information.

The eight high-resolution rotary controls R1 – R8 generate continuous controller information. They are the controllers that are shown above the buttons in the table. All rotary controllers can be assigned to any controller in ASSIGN mode.

The eight buttons B1 - B8 generate switch controllers. Again, they are assigned to various functions ex factory (see table on the device). Like the rotary controls the buttons can be freely assigned to any controller in ASSIGN mode.

The table shows the controller assignment preset at the factory.

Keyboard legend: Informs you about the special functions performed by individual keys on the keyboard. The individual elements of the keyboard legend are described in detail in chapter “4. Operation”.

3. CONTROL ELEMENTS AND CONNECTIONS
4. OPERATION

We will explain the operation of the UMX in detail in the following. You must observe the following: There is a differentiation between push-buttons (refer to control elements 102) and keys (control element 103). Please do not confuse these!

4.1 THE PLAY MODE

The UMX will be in the Play Mode immediately after it is switched on. Here you can immediately begin to play, modify the filtering process via the rotary controls, execute panning, control software synthesizers and so on...

4.1.1 THE FACTORY MEMORY

The FACTORY MEMORY is the installed memory in which the basic settings of the UMX are defined. The controller map described under 89 is the most important item of the FACTORY MEMORY. These settings are automatically loaded after each start of the device and control many useful parameters.

Instructions which are changed within a session are discarded when the device is switched off. We have equipped the UMX with a USER MEMORY, in order to still be able to store changed allocations.

4.1.2 THE USER MEMORY

Settings which are stored in the USER MEMORY remain stored in the internal Flash ROM and are retained after the device is switched off.

Change to the USER MEMORY by pressing push-button 86. If you call up the USER MEMORY for the first time, the settings of the FACTORY MEMORY will be used initially. As soon as you execute changes in the existing controller map, they are automatically stored - without requiring any further action.

In the USER MEMORY, allocations including channel information of the following control elements can be permanently stored:

- FOOT SWITCH connection
- OCTAVE SHIFT push-button
- VOLUME/DATA fader
- PITCH BEND wheel
- MODULATION wheel
- Rotary controls R1 - R8
- Push-buttons B1 - B8

Please close all programs if you want to switch off the UMX25 while the computer is running or terminate the USB connection.
4. OPERATION

4.2 THE ASSIGN MODE

As already mentioned in previous chapters, the ASSIGN Mode is a powerful tool to optionally reconfigure the UMX into an ultra-comfortable controller.

The basic logic of the allocation process has been introduced to you in chapter “3 Control elements”. In the following we will offer you more detailed information to enable you to use the UMX even more efficiently.

4.2.1 Setting the GLOBAL CHANNEL

The UMX recognizes two separate classifications in regard to MIDI channels. There is a GLOBAL CHANNEL and 15 additional SINGLE CHANNELs.

The GLOBAL MIDI CHANNEL is the channel through which all MIDI commands are sent in the factory setting: messages by various control elements, as well as the Note On and Note Off commands. To change this channel, proceed as follows:

1) Press the ASSIGN push-button and hold it down.
2) Press the CH SELECT key.
3) Release the ASSIGN push-button.
4) Define the GLOBAL CHANNEL by operating one of the
   keys CH 1 through CH 16 on the keyboard.
5) Finally, press the ENTER key. In order to discard your
   assignments, please press the CANCEL key or press the
   ASSIGN push-button again. The ASSIGN LED will go off
   in all 3 cases.

The factory setting for the GLOBAL CHANNEL is channel 1.

4.2.2 The individual channel assignment

The assignment of individual control elements to defined channels is useful if you want to control several external devices independently from each other.

Example:

You are playing synthesizer A through channel 2 with the keyboard and have a sequencer program controlling another synthesizer B through channel 5. You can now control the filter frequency of device B through one of the eight jog/shuttle controls in real time and simultaneously continue to play device A without changing the filter frequency.

1) Press the ASSIGN push-button and hold it down.
2) Activate the control element, for which another channel
   than the GLOBAL CHANNEL is to be set. If this is a controller
   or fader, briefly move the control element; when you have
   decided on a push-button, press this push-button once.
   The UMX now “knows” to which control element you would
   like to assign a SINGLE CHANNEL.
3) Release the ASSIGN push-button.
4) Press one of the 16 channel keys CH 1 through
   CH 16.
5) Finally, press the ENTER key. In order to discard your
   assignments, please press the CANCEL key or press the
   ASSIGN push-button again. The ASSIGN LED will go off
   in all 3 cases.

All control elements of the UMX follow the GLOBAL CHANNEL in their channel settings (factory settings). This means that a control element is always in the GLOBAL CHANNEL until you assign it to another channel. Please also consider this when you change the GLOBAL CHANNEL, since various elements will also change accordingly!

4.2.3 Assigning the GLOBAL CHANNELS:

1) Press the ASSIGN push-button and hold it down.
2) Activate the control element for which the GLOBAL
   CHANNEL is to be set. If this is a controller or fader, briefly
   move the control element; when you have decided on a
   push-button, press this push-button once. The UMX now
   “knows” to which control element you would like to assign
   a GLOBAL CHANNEL.
3) Release the ASSIGN push-button.
4) Press the GLOBAL key.
5) Finally, press the ENTER key. In order to discard your
   assignments, please press the CANCEL key or press the
   ASSIGN push-button again. The ASSIGN LED will go off
   in all 3 cases.

4.2.4 The PANIC key combination

Imagine that you have been working continuously on one song for several hours and a note suddenly “hangs up”. If you now execute a PANIC command, a sound producing device receiving this command becomes silent immediately.

1) Press the ASSIGN push-button and hold it down.
2) Press one of the two
   keys or press the
   keys.
3) Release the ASSIGN push-button. The device will
   automatically return to the normal play mode.

The command “All Notes Off” will be sent immediately after you have pressed one of the two keys.

4.2.5 The SNAPSHOT SEND command

The SNAPSHOT command triggers the transmission of all parameters including their current values. All control element assignments as well as their temporary settings on the respective channels are transmitted to the MIDI OUT socket and to the USB output of the UMX.

It is possible by this method to transfer the complete UMX mapping to a sequencer software at the beginning of a song. This is to make sure the song is played with the last valid controller values. Apart from this, the SNAPSHOT allows you to reset the correct values in an external device where parameters have shifted.

1) Press the ASSIGN push-button and hold it down.
2) Press the
   keys.
3) Release the ASSIGN push-button. The device automatically
   returns to the normal play mode.

The SNAPSHOT command is transmitted immediately after activating the keyboard.

4.2.6 LOCAL OFF in the UMX

The LOCAL OFF in the UMX has the effect that value entries made via the control elements are neither transmitted to the MIDI OUT socket nor to the USB OUT. It is therefore possible in the LOCAL OFF mode, for example, to readjust the rotary controls without transmitting data to the generally selected external devices.

1) Press the ASSIGN push-button and hold it down.
2) Press the
   key.
3) Release the ASSIGN push-button again and complete the
   desired settings on the control elements.
4) Then, press the
   key or the
   key. The LED of the ASSIGN key goes off in both cases and you are in
   normal play mode again.
4.2.7 Assignment of control elements

We explained in chapter 4.2.2 how an individual channel can be assigned to each control element. You will now find out how to assign new controllers and a channel.

a) The assignment for rotary controls R1 - R8, the MODULATION controller, the PITCH BEND wheel, as well as the DATA fader

1) Press the ASSIGN push-button and hold it down.
2a) If you would like to assign one of the eight rotary controls, turn the respective controller.
2b) If you assign the MODULATION controller, please activate one of the keys located below the lettering MOD WHEEL ASSIGN, MODUAL, VOLUME or CC. You can bypass step 5, if you decide on the MODUAL and/or the VOLUME key. The MIDI controller "MODULATION" (CC 1) and/or "CHANNEL VOLUME" (CC 7) is then directly assigned to the MODULATION controller without having to enter a controller number first.
2c) If you assign the PITCH BEND wheel, please activate one of the keys located below the lettering PB WHEEL ASSIGN, PB TEND or CC. You can bypass step 5, if you decide on the PB TEND key. The original pitch bend function is then directly assigned to the PITCH BEND wheel.
2d) If you complete an assignment for the DATA fader, please activate one of the keys located below the lettering SLIDER ASSIGN, VOLUME or CC. You can bypass step 5 if you decide on the VOLUME key. The original volume function is then directly assigned to the DATA fader.
3) Release the ASSIGN push-button again.
4) Press one of the 16 channel push-buttons through CH 16 to define the channel.
5) Press the number keys on the keyboard in sequence until you have completely entered the desired controller number. Only value entries between 0 and 127 are possible. Greater values are ignored by the device.
Example: - Press 1 and 5 if you have decided on CC 14, for example.
- Press 1, 6 and 7 if you would like to select CC 107.
6) Finally press the ENTER key. In order to discard your assignments, please press the CANCEL key or press the ASSIGN push-button again. The LED of the ASSIGN push-button will go off in all 3 cases.

b) Assigning push-buttons B1 - B8 and the optional sustain pedal connected to the socket (ES)

1) Press the ASSIGN push-button and hold it down.
2) Press the related control element once (however, it is not necessary to continue pressing it).
3) Release the ASSIGN push-button again.
4) Press one of the 16 channel push-buttons through CH 16 to define the channel.
5) Press the number keys on the keyboard in sequence until you have completely entered the desired controller number. Only value entries between 0 and 127 are possible. Greater values are ignored by the device.
6) Finally, press the ENTER key. In order to discard your assignments, please press the CANCEL key or press the ASSIGN push-button again. The LED of the ASSIGN push-button will go off in all 3 cases.

Please note two exceptions in conjunction with the push-buttons and/or the sustain pedal.

If you assign CC 07 (Channel Volume) to the push-buttons, a channel volume of 0 is triggered each time you press the push-button. This means the channel is always mute. This feature is very useful for live operation.

If you use controller CC 10 (panning) for the push-buttons or the sustain pedal, pressing the control element transmits value 64. This results in hearing the content of the channel in the center of the stereo panorama.

Der Befehl “All Notes Off” wird sofort gesendet, nachdem Sie eine der beiden Tasten gedrückt haben.

4.2.8 Program and bank change

You have three different options achieving a program change in external devices with the UMX. This is a very powerful function, which will enable you to use the full spectrum of all of your sound producers.

Options a) and b) will allow you to select any programs by means of a defined selection procedure, which always has to be completed. The process is generally accelerated in the third option c), so that you will be able to directly select programs by pressing the push-button once.

a) If you are sure that you want to select from 128 different programs only, you will achieve the ASSIGN mode program change by the following method. As soon as the quantity of 128 is exceeded, however, you must apply the process described under paragraph b).

1) Press the ASSIGN push-button and hold it down.
2) Press one of the 16 white channel keys through CH 16 on the keyboard. You have now defined the channel by which the program change will be transmitted.
3) Release the ASSIGN push-button.
4) Press the PROGRAM key.
5) Press the number keys in sequence until you have completely entered the desired program number. Only value entries between 0 and 127 are possible. Greater values are ignored by the device.
Example: - Press 1 and 5 if you have decided on program 15, for example.
- Press 1, 6 and 7 if you would like to select program 127.
6) Press the ENTER key. In order to discard your assignments, please press the CANCEL key or press the ASSIGN push-button again. The ASSIGN LED will go off in all 3 cases.

b) If you have more than 128 programs, you must apply the following process to achieve a program change. In this case, your programs will be organized in banks which are activated by a special MIDI command: the BANK SELECT command. In the following section, this command is briefly described. A brief introduction for this is listed in the following:

The BANK SELECT command consists of two parts: An MSB part and an LSB part.

The MSB part describes a value range of 128 different values and is the more important part of the DATA BASE SELECT command for many external devices.
The LSB part describes each of the 128 MSBs in another 128 individual stages. Both are individually numbered from 0 to 127.

The enormous value range of a total of 128 x 128 = 16,384 different values is therefore available to you via the BANK SELECT command. This theoretically means that you could use external devices which support the same amount of different banks.

If you consider that each of these banks again contains another 128 individual programs, you will receive the unbelievably large number of 2,097,152 different options to organize these programs.

1) Press and hold the ASSIGN push-button.
2) Press one of the 16 channel keys through CH 16, or press the GLOBAL key.
3) Release the ASSIGN push-button.
4) Press the BANK MSB key. Then press the number keys in sequence until you have completely entered the desired BANK MSB number. Only value entries between 0 and 127 are possible. Greater values are ignored by the device.
5) Now define the BANK LSB by pressing the BANK LSB key. Then enter the number value of the BANK LSB with the already familiar procedure (see step 4). The same entry rules apply as for the BANK MSB.
6) Press the PROGRAM key and then press the number keys in sequence until you have completely entered the desired program number. Only entries between 0 and 127 are possible, greater values are ignored by the device. Ready!
7) Finally, press the ENTER key. In order to discard your assignments, please press the CANCEL key or press the ASSIGN push-button again. The ASSIGN LED will go off in all 3 cases.

Example:
- Press 1 and 4 if you have decided on MSB 14, for example.
- Press 1, 0 and 7 if you would like to select MSB 107.

4.2.9 Additional functions of the OCTAVE SHIFT push-buttons
The OCTAVE SHIFT push-buttons of the device are in their initial state every time the UMX is switched on (refer to table 3.1).

Further special functions can be assigned to both push-buttons in the ASSIGN mode in addition to the already covered functions regarding direct program change and octave transposition:

- Transposition in individual semitone steps
- Sequential scrolling in program libraries
- Optional controller functions

As soon as you assign a function to one of the two push-buttons, the second push-button will automatically assume the same function - however, it is still restricted in its functionality: It is not capable of sending data until you assign a function to this push-button with the ASSIGN procedure.

As soon as you assign an individual MIDI channel to one of the two push-buttons, the other push-button will also switch to this channel. This also applies if you return to the GLOBAL CHANNEL.

a) Transposition in individual semitone steps
1) Press the ASSIGN push-button and hold it down.
2) Press the OCTAVE SHIFT push-button.
3) Release the ASSIGN push-button.
4) Defined the channel by which the program change will be transmitted. Press one of the 16 channel keys through CH 16 on the keyboard.
5) Press the PROG key. Then press the number keys on the keyboard in sequence until you have completely entered the desired preset number. Only value entries between 0 and 127 are possible. Greater values are ignored by the device.
6) Finally, press the ENTER key. In order to discard your assignments, please select the CANCEL key or press the ASSIGN push-button again. The ASSIGN LED will go off in all 3 cases.

A keyboard can consist of a maximum of 128 semitones according to the MIDI standard. If you have reached the lower or upper end of this tone range with the transposition function, you cannot exceed the highest or lowest tone despite continued pressing of the transposition push-button. This also applies to the transposition in octave steps.

A keyboard can consist of a maximum of 128 semitones according to the MIDI standard. If you have reached the lower or upper end of this tone range with the transposition function, you cannot exceed the highest or lowest tone despite continued pressing of the transposition push-button. This also applies to the transposition in octave steps.
b) Sequential scrolling in program libraries.

Most sound producers have the option to store presets in a separate bank (frequently called a User Bank). If the sequence of songs to be played at a concert is defined by your band, you can store all of the sounds used for the gig in the User Bank in the sequence they occur in the concert and completely concentrate on your playing. A cumbersome search for sounds in the sound producers is no longer required thanks to the OCTAVE SHIFT push-buttons.

1) Press the ASSIGN push-button and hold it down.
2) Press the "PROG x" key.
3) Release the ASSIGN push-button.
4) Finally, press the ENTER key. In order to discard your assignments, please press the CANCEL key or press the ASSIGN push-button again. The ASSIGN LED will go off in all 3 cases.

Pressing the right hand one of the two push-buttons now causes your external device to switch one preset number upward to be switched upward in your external device; pressing the left hand causes a step downward in your preset library. By pressing both push-buttons you jump to Preset 0 in the current bank.

Please note that you must assign an individual MIDI channel to the OCTAVE SHIFT push-buttons if you do not want to work in the GLOBAL CHANNEL (refer to chapter 4.2.2).

c) Optional controller functions

Please note that the OCTAVE SHIFT push-buttons generate switch controllers in the event of a controller assignment. One of the two values 0 or 127 will always be produced.

There are two exceptions: if you assign controller CC 07 (Channel Volume) to the OCTAVE SHIFT push-buttons, pressing one of the push-buttons will always generate the value 0. In case of controller CC 10 (panning), pressing a push-button will always produce the value 64.

Please note that pressing both push-buttons simultaneously does not generate anything when assigning a controller.

1) Press the ASSIGN button and keep it pressed.
2) Press the one of the two OCTAVE SHIFT buttons to which you want to assign a controller.
3) Release the ASSIGN button.
4) Press the number keys on the keyboard to enter the controller number of your choice (as described in chapter 4.2.1).
5) Confirm your selection with ENTER. To discard your assignments either press the CANCEL button or the ASSIGN button again.

Remember to assign the OCTAVE SHIFT buttons to an individual MIDI channel if you do not want to use the GLOBAL CHANNEL (see chapter 4.2.2).

4.2.10 RANGE definitions

The RANGE parameter can be defined for the PITCH BEND wheel and the key velocity.

a) for the PITCH BEND RANGE: This defines to what extent the movement of the PITCH BEND wheel affects the pitch of the sound. Proceed as follows to change the PITCH BEND RANGE:

1) Press the ASSIGN button and keep it pressed.
2) Use the number keys to enter the keyboard velocity (see table 4.1).
3) Release the ASSIGN button.
4) Confirm your selection with ENTER. To discard your assignments either press the CANCEL button or the ASSIGN button again.

KEY | EFFECT ON KEY VELOCITY
---|---
0  | OFF: velocity value is fixed to 110. Change of key pressure has no effect on volume level.
1  | SOFT: key pressure is very sensitive; low velocity changes create high changes in volume level
2  | MEDIUM: key pressure is “normal”; (very) hard hit notes are (very) loud, (very) soft hit notes produce (very) low volume
3  | HARD: key pressure is more unsusceptible compared to all other settings
4  | invalid input
5  | invalid input

Table 4.1: Effect of RANGE definition on keyboard velocity

4.2.11 The FACTORY RESET command

To reset all settings on your UMX25, proceed as follows:

1) Press the ASSIGN push-button and hold it down.
2a) To cause a temporary FACTORY RESET, simultaneously press both OCTAVE SHIFT push-buttons. All temporarily changed control elements are returned to their factory settings. The USER MEMORY, however, is retained and will not be reset.
2b) Simultaneously press the 8, 9, and 0 keys to perform a complete FACTORY RESET. In this case, the USER memory is also overwritten, in addition to resetting all control elements of the FACTORY MEMORY.
3) Release the ASSIGN push-button again. The LED of the ASSIGN push-button continues to be illuminated.
4) Finally, press the ENTER key. If you do not wish to perform the RESET command, please press either the CANCEL key or press the ASSIGN push-button again.
5. SPECIFICATIONS

**USB connections**
- **Type**: Type B; USB1.1

**MIDI connections**
- **Type**: 5-pin DIN plug OUT

**CONTROL ELEMENTS**
- **Controller**: 1 control wheel with center reset
  - 1 control wheel without center reset
  - 8 rotary knobs
  - 1 fader
- **Buttons**: 12 buttons
- **Keyboard**:
  - UMX49: 49 keys; velocity-sensitive
  - UMX61: 61 keys; velocity-sensitive

**SWITCH PLUG**
- **Foot pedal**: 1/4" - Monojack with automatic polarity recognition

**POWER SUPPLY**
- **USB**
- **Battery**: 3 x 1.5 Volt Mignon (Typ “AA”)
- **Mains connection**: 2 mm (1/13”) DC connection, Center negative

**Power consumption**
- **UMX49**: max. 0.9 W
- **UMX61**: max. 0.9 W

**DIMENSIONS/WEIGHT**
- **Dimensions (W x H x L)**
  - **UMX49**: 215 mm x 97 mm x 825 mm
  - **UMX61**: 215 mm x 97 mm x 990 mm
- **Weight**
  - **UMX49**: 3.904 kg
  - **UMX61**: 4.689 kg

BEHRINGER is constantly striving to maintain the highest professional standards. As a result of these efforts, modifications may be made from time to time to existing products without prior notice. Specifications and appearance may differ from those listed or illustrated.

7. WARRANTY

§ 1 OTHER WARRANTY RIGHTS AND NATIONAL LAW
1. This warranty does not exclude or limit the buyer's statutory rights provided by national law, in particular, any such rights against the seller that arise from a legally effective purchase contract.

2. The warranty regulations mentioned herein are applicable unless they constitute an infringement of national warranty law.

§ 2 ONLINE REGISTRATION
Please do remember to register your new BEHRINGER equipment right after your purchase by visiting www.behringer.com (alternatively www.behringer.de) and kindly read the terms and conditions of our warranty carefully.

Registering your purchase and equipment with us helps us process your repair claims quicker and more efficiently.

Thank you for your cooperation!

§ 3 WARRANTY
1. BEHRINGER (BEHRINGER International GmbH including all BEHRINGER subsidiaries listed on the enclosed page, except BEHRINGER Japan) warrants the mechanical and electronic components of this product to be free of defects in material and workmanship for a period of one (1) year* from the original date of purchase, in accordance with the warranty regulations described below. If the product shows any defects within the specified warranty period that are not excluded from this warranty as described under § 5, BEHRINGER shall, at its discretion, either replace or repair the product using suitable new or reconditioned parts. In the case that other parts are used which constitute an improvement, BEHRINGER may, at its discretion, charge the customer for the additional cost of these parts.

2. If the warranty claim proves to be justified, the product will be returned to the user freight prepaid.

3. Warranty claims other than those indicated above are expressly excluded.

§ 4 RETURN AUTHORIZATION NUMBER
1. To obtain warranty service, the buyer (or his authorized dealer) must call BEHRINGER (see enclosed list) during normal business hours BEFORE returning the product. All inquiries must be accompanied by a description of the problem. BEHRINGER will then issue a return authorization number.

2. Subsequently, the product must be returned in its original shipping carton, together with the return authorization number to the address indicated by BEHRINGER.

3. Shipments without freight prepaid will not be accepted.

§ 5 WARRANTY REGULATIONS
1. Warranty services will be furnished only if the product is accompanied by a copy of the original retail dealer's invoice. Any product deemed eligible for repair or replacement under the terms of this warranty will be repaired or replaced.

2. If the product needs to be modified or adapted in order to comply with applicable technical or safety standards on a national or local level, in any country which is not the country for which the product was originally developed and manufactured, this modification/adaptation shall not be considered a defect in materials or workmanship. The warranty does not cover any such modification/adaptation, irrespective of whether it was carried out properly or not. Under the terms of this warranty, BEHRINGER shall not be held responsible for any cost resulting from such a modification/adaptation.

3. Free inspections and maintenance/repair work are expressly excluded from this warranty, in particular, if caused by improper handling of the product by the user. This also applies to defects caused by normal wear and tear, in particular, of faders, crossfaders, potentiometers, keys/buttons, tubes, guitar strings, illuminants and similar parts.

4. Damages/defects caused by the following conditions are not covered by this warranty:

- improper handling, neglect or failure to operate the unit in compliance with the instructions given in BEHRINGER user or service manuals.
- connection or operation of the unit in any way that does not comply with the technical or safety regulations applicable in the country where the product is used.
- damages/defects caused by force majeure or any other condition that is beyond the control of BEHRINGER.

5. Any repair or opening of the unit carried out by unauthorized personnel (user included) will void the warranty.

6. If an inspection of the product by BEHRINGER shows that the defect in question is not covered by the warranty, the inspection costs are payable by the customer.

7. Products which do not meet the terms of this warranty will be repaired exclusively at the buyer's expense. BEHRINGER will inform the buyer of any such circumstance. If the buyer fails to submit a written repair order within 6 weeks after notification, BEHRINGER will return the unit C.O.D. with a separate invoice for freight and packing. Such costs will also be invoiced separately when the buyer has sent in a written repair order.

§ 6 WARRANTY TRANSFERABILITY
This warranty is extended exclusively to the original buyer (customer of retail dealer) and is not transferable to anyone who may subsequently purchase this product. No other person (retail dealer, etc.) shall be entitled to give any warranty promise on behalf of BEHRINGER.

§ 7 CLAIM FOR DAMAGES
Failure of BEHRINGER to provide proper warranty service shall not entitle the buyer to claim (consequential) damages. In no event shall the liability of BEHRINGER exceed the invoiced value of the product.
